

Asphalt Recycler to Save Time and Money

Islip, NY – Islip Town Supervisor Phil Nolan (left) and Richard Baker (right), acting Commissioner of the Department of Public Works, recently visited the Highway Yard in Central Islip to view the operation of a newly leased asphalt recycler.

The machine works by recycling used paving asphalt chunks into usable material for road construction and pot-hole filling. The portable recycler yields up to 10 tons of usable asphalt per hour and is capable of operating year-round in both hot and cold weather. It utilizes only 1.5 gallons of diesel fuel to recycle each ton of material.
